

WatchDesk V2.2.1

Reference Guide

How WatchDesk information flows

One saved action feeds every role-specific view from the same operations record.

Best one-sentence explanation

A guard saves once. Each page updates only when that action belongs there: check-ins update operations and payroll counts. DAR/IR notes also update Reports.

Guard action -> shared record -> role-specific operational updates

Live prototype: <https://watchdesk-security-operations.vercel.app/>

Prepared June 14, 2026

Start here

What this prototype proves, who sees what, and the one limitation to say out loud.

Core idea: A guard action is entered once. WatchDesk then updates only the relevant operational views. Hourly check-ins update Guard, Admin, Activity, and Payroll counts; DAR/IR notes additionally update Reports.

Role hierarchy at a glance

Role	Profile	Main screens	Primary job
UL	Field guard	Guard App; own reports	Enter DAR/IR notes, hourly check-ins, finish shift.
CFSL	Site supervisor	Admin; Guard App; Reports	Respond to missed check-ins, supervisor requests, tours, and IR review.
CML	Operations manager	Admin; Payroll; Reports; Setup	Manage operations, payroll review, reports, and setup.
CAL	Client account lead	Admin; Payroll; Reports; Setup	Review 7-day account health and client-level activity.
ARUL	Account/billing user	Account; Setup	Review users, locations, bills, package, and account status.
SA	Super admin	All sections and controls	Full prototype access.

How to run the demo

1. Open <https://watchdesk-security-operations.vercel.app/>.
2. Select Reset demo before presenting.
3. Choose UL - Field guard and perform an action.
4. Switch roles in the same browser without resetting to show the downstream changes.

Current prototype limitation: The static prototype stores data in this browser's localStorage. It demonstrates the complete workflow in one browser, but a real guard phone will not yet update a separate admin computer. Production requires Supabase Auth, Postgres, row-level security, realtime notifications, and package permissions.

The connected data model

Every page is a different view of the same shift, report, check-in, queue, payroll, and activity records.

How WatchDesk information flows

One saved action feeds every role-specific view from the same operations record.

Best one-sentence explanation

A guard saves once. Each page updates only when that action belongs there: check-ins update operations and payroll counts; DAR/IR notes also update Reports.

What changes immediately

Guard action	System updates	Important rule
DAR saved	Active report + Reports + Unfinished + Activity	No mandatory DAR review.
IR saved	Unviewed IR + Needs Attention + Payroll Review + Activity	Viewing clears Unviewed; finalizing closes it.
All normal	Timeline + post time + payroll check-in count + Activity	Reports, Account, and Setup do not change.
Need supervisor	All normal updates + Top Priority + Payroll Review	Reports still does not change; acknowledgement closes only the request.
Finalize	Report locks + Unfinished falls + Continue returns to Start	Official record remains in Reports.
Finish shift	Admin post = Finished + Payroll recalculates + Activity	Review can remain when an exception is unresolved.

UL Guard App home

The guard should understand the screen in seconds, without opening a full form first.

UL Guard App: one simple starting point

The guard begins with four actions; reports stay collapsed until selected.

1 Start or continue the DAR

The label changes automatically. If an unfinished DAR exists, the button reads Continue Active DAR.

2 Start or continue an IR

Incident reporting is separate from routine DAR notes. A saved IR immediately becomes visible to operations.

3 Hourly Check-In

The guard chooses All normal or Need supervisor. This is the fastest connected-workflow demonstration.

4 Other / Future

Reserved for future tools such as visitor logs, photos, keys, maintenance, or post-specific tasks.

5 Active Report cards

Shows status, last saved note, start time, Continue editing, and Finalize. Saving a note always returns here.

Report naming rule: If an unfinished report already exists for the shift, Start DAR/IR becomes Continue Active DAR/IR. Saving a note returns to this home. Finalizing returns the action to Start.

Hourly Check-In

The same two-button screen supports routine confirmation and an urgent request.

Hourly Check-In: two choices, two outcomes

Both choices save a check-in. Only Need supervisor creates an urgent queue item.

1 ALL NORMAL

- Save a received check-in and update the guard timeline
- Refresh the admin post's last check-in time
- Increase the payroll check-in count
- Add Guard check-in received to live activity
- Leave Reports unchanged because no DAR/IR was created

2 NEED SUPERVISOR

- Save the same received check-in and timeline entry
- Add Supervisor requested to CFSL/CML Top Priority
- Increase the open supervisor-request metric
- Move the payroll row to Review
- Leave Reports unchanged; the check-in is not an incident report

Production routing Route to the active CFSL for the site/group; escalate to CML if not acknowledged; paid add-on package may control alerts.

Guard steps

1. Select Hourly Check-In.
2. Confirm the guard name, assigned site/location, and current time.
3. Select All normal or Need supervisor.
4. The check-in saves and the guard returns to the four-button home.

After a guard checks in: every page explained

This is the exact cross-page effect of All normal and Need supervisor.

Page / record	All normal	Need supervisor
Guard App	Adds a received check-in to the Guard Timeline, updates the last check-in time, and returns to the four-button home.	Adds the same timeline item, clearly labeled Supervisor requested.
Admin Dashboard	Refreshes the guard/post check-in status and adds Guard check-in received to Recent Activity.	Does the normal updates and adds Supervisor requested to Top Priority and the request metric.
CFSL/CML queues	No supervisor-request item is created.	Creates an open request for the active site/group. Future production routing assigns CFSL and can escalate to CML.
Payroll	Received Check-ins increases by one. Missed does not increase. Hours and gross pay still come from elapsed shift time and the guard's wage.	Received Check-ins increases by one and the row can move to Review. Gross pay still uses hours x that guard's rate.
Reports	No change. An hourly check-in is not a DAR or IR.	No change. Requesting a supervisor does not automatically create an incident report.
Account	No change to billing, package, activation, location, or account status.	No change.
Control Center / Setup	No change to users, sites, posts, shifts, tour patterns, assignments, holidays, or package settings.	No change.
Live Activity	Adds a timestamped Guard check-in received event.	Adds a timestamped Supervisor requested event.

Payroll rule: A check-in proves contact and updates operational counts. It does not pay a flat amount. Estimated pay remains regular hours x regular rate plus overtime hours x the guard's 1.5x overtime rate.

Reports rule: Reports changes only when the guard saves a DAR or IR note. This separation prevents a routine hourly check-in from becoming an official activity or incident report.

Supervisor request and acknowledgement

Operations sees the request immediately and can close the queue without erasing the check-in.

Supervisor response: request to acknowledgement

The urgent queue closes, while the original check-in remains part of the record.

1 Metric changes

Supervisor requested increases and becomes an actionable card.

2 Top Priority

The request identifies the guard, site, and reason. Select Acknowledged after contact.

3 Other work remains

IR review, unfinished reports, tours, and payroll review are independent follow-up items.

What Acknowledged changes

Area	Result
Supervisor queue	Open request closes.
Top Priority	Supervisor requested item disappears.
Metric	Open supervisor-request count decreases.
Live activity	Acknowledgement event is added.
Original check-in	Remains saved in the timeline and payroll count.
Payroll	Review may remain until payroll is separately approved or rejected.

DAR and IR workflows

Both reports save to the same system, but incidents deliberately create more operational attention.

DAR and IR lifecycle: similar tools, different attention rules

DAR completion is tracked; IRs create review work and an Unviewed state.

DAR - ROUTINE ACTIVITY

- 1 Start / Continue**
Open the report for the current shift.
- 2 Save note**
Return home; Active DAR, Reports, unfinished count, and activity update.
- 3 Finalize**
Lock as Completed; unfinished count falls; home returns to Start DAR.
- R No mandatory review**
Supervisor review may be added, but DAR completion does not require it.

IR - INCIDENT

- 1 Start / Continue**
Open the incident report for the current shift.
- 2 Save note**
Create Unviewed IR, Needs Attention item, payroll Review, and activity event.
- 3 Preview**
Clear Unviewed status only. The IR remains unfinished.
- 4 Finalize**
Lock the official record and reduce unfinished reports.

Remember: A saved note does not mean a report is finalized. Previewing an IR clears Unviewed, but does not complete it. DAR completion is tracked without mandatory supervisor review.

After Save note: exact downstream changes

Page	Visible result
Guard home	Returns to four actions; Active Report card shows the last saved note and start time.
Admin	Unfinished remains. A new IR also increases Unviewed IRs and adds IR needs review.
Reports	DAR/IR record and narrative update; state remains Unfinished until finalization.
Payroll	IR adds an incident and can move the officer row to Review. Routine DAR notes do not.
Activity	Adds a timestamped DAR note saved/updated or IR created event.

Admin Dashboard

CFSL and CML work from two queues: urgent response first, operational follow-up second.

Queue dictionary

Section	Contains	Operator response
Top Priority	Missed check-ins; Supervisor requested	Contact the guard/site and acknowledge the request.
Needs Attention	Tour violations; missed tours; IRs needing review; unfinished reports	Review, correct, finalize, or follow up.
Actionable metrics	Small cards above the queues	Select a metric to preview or focus its related work.
Recent activity	Guard and supervisor events	Confirms what happened, when, and by whom.

Payroll Summary and Detail

Every officer is calculated from that officer's rate, hours, and overtime.

Payroll: each guard's wage drives their own total

Check-ins affect counts and review status; gross pay is hours multiplied by the selected guard's rate.

WatchDesk V2.2.1
Guard Row cleanup: Read DARTS data, report specific activities, and production-ready shift ownership.

CURRENT PERIOD
Pay period - this week: Open

GUARD	SITE	SHIFT	REGULAR HOURS	OVERTIME HOURS	CHECK-INS	MISSED	INCIDENTS	GROSS PAY	STATUS	ACTION
Jordan Miles SG-1007 - \$22.00/hr	Warehouse North	8:00 AM-4:00 PM	2.54	0.00	4	0	1	\$57.18	Review	Details Approve Reject
Riley Chen SG-1014 - \$21.00/hr	Medical Plaza	7:00 AM-3:00 PM	3.54	0.00	0	1	1	\$74.34	Review	Details Approve Reject
Avery Stone SG-1022 - \$24.00/hr	Transit Lot C	6:00 AM-2:00 PM	4.54	0.00	1	0	0	\$108.96	Ready	Details Approve Reject

OFFICER PAYROLL DETAIL
Avery Stone

GUARD NAME Avery Stone	EMPLOYEE ID SG-1022
SITE Transit Lot C	DATE HOURS Jun 14, 2020
TIME IN 8:34 AM	TIME OUT Active shift
HOURLY RATE \$24.00/hr	REGULAR HOURS 4.54
REGULAR PAY \$108.96	OVERTIME HOURS 0.00
OVERTIME RATE \$36.00/hr	OVERTIME PAY \$0.00
HOLIDAY HOURS 0.00 placeholder	HOLIDAY PAY \$0.00 placeholder
TOTAL HOURS	ESTIMATED GROSS PAY

WatchDesk V2.2.1
Guard Row cleanup: Read DARTS data, report specific activities, and production-ready shift ownership.

Go offline | Reset demo | Export data

1 Clickable summary row

Use the row to choose an officer. Review status signals a missed check-in, incident, or supervisor request.

2 Selected officer pay

Shows that officer's rate, regular pay, 1.5x overtime rate, overtime pay, and estimated gross pay.

3 Two totals

Selected officer gross changes by row. Period gross pay remains the total for all visible guards. CSV uses the same math.

Payroll controls

- Select a guard row to update Selected officer gross and open that officer's rate, hours, regular pay, overtime rate, overtime pay, holiday placeholders, incidents, and approval.
- Regular pay = regular hours x the guard's hourly rate. Overtime pay = overtime hours x 1.5 x that guard's hourly rate.
- Period gross pay is the total of all visible officer rows, so it does not become a selected-officer total.
- Hourly check-ins increase the received count. Need supervisor, a missed check-in, or an IR can move the row to Review, but check-ins do not directly add wages.
- Approve or Reject updates both Payroll Summary and Payroll Detail.
- Close pay period locks every row; CSV exports the same rates and pay calculations shown on screen.

Reports and PDF readiness

Reports is the official DAR/IR record view; hourly check-ins remain outside this list.

Reports: official record and PDF-ready preview

Viewing, finalizing, and printing are separate actions with different effects.

The screenshot shows the WatchDesk V2.2.1 interface. The top navigation bar includes 'Go offline', 'Reset demo', and 'Export data'. The main menu has 'Admin Dashboard', 'Guard App', 'Payroll', 'Reports', 'Account', and 'C 3 iter / Setup'. The 'Reports' section is active, showing a list of reports on the left and a detailed preview on the right. The left panel has a 'Finalize selected' button. The right panel has a 'Print / Save as PDF' button. The preview shows details for a report titled 'IR - Suspicious person'.

1 Select a report

An unviewed IR clears its Unviewed status when previewed, but remains open until finalized.

2 Official preview

Shows report type, guard, employee ID, site, shift, time, status, narrative, review, and signature placeholders.

3 Print / Save as PDF

Uses `window.print()`. In production, a PDF service should create and store immutable official files.

Print / Save as PDF

1. Select the DAR or IR record.
2. Review the official preview and status.
3. Select Print / Save as PDF.
4. Choose Save as PDF in the browser print dialog.

Report states

State	Meaning
Unviewed	An IR has not yet been opened by operations. Previewing clears only this status.
Unfinished	The report has saved data but has not been finalized.
Completed / Finalized	The report is complete, locked, and no longer appears as an active Continue report.

Account, setup, and production growth

Higher roles can see account health and the modules needed to turn the prototype into a service.

Account oversight and Control Center setup

ARUL focuses on the account; CML, CAL, ARUL, and SA can access production setup placeholders.

ARUL - ACCOUNT / BILLING

Active users, activation date, locations, recent bills, paid/unpaid status, package, and account-status placeholders.

CONTROL CENTER / SETUP

Users, Sites, Posts, Shifts, Tour patterns, Supervisor assignments, Holiday calendar, and Billing/package settings.

Production component	Purpose
Supabase Auth	Replace the role selector with real sign-in and role membership.
Postgres tables	Persist users, sites, shifts, reports, check-ins, queues, payroll, and events.
Row-level security	Limit records by role, account, site, and assignment.
Realtime notifications	Deliver CFSL alerts and CML escalation across devices.
SaaS permissions	Enable packages, limits, paid alerts, and billing controls.
PDF service	Generate immutable official DAR/IR files with audit history.

Patrick-ready walkthrough

A short demonstration that proves the application is connected, role-aware, and ready for production planning.

Step	Show	What to do
1	Reset	Select Reset demo; choose UL.
2	Guard home	Point out the four actions and Active Report cards.
3	DAR	Continue the active DAR, change the note, Save note, and show the updated home card.
4	Request help	Hourly Check-In -> Need supervisor.
5	Supervisor	Switch to CFSL; show the metric and Top Priority request; select Acknowledged.
6	Incident	Switch to UL; create an IR with a short narrative.
7	Operations	Switch to CFSL/CML; show Unviewed IRs, Unfinished reports, Needs Attention, and activity.
8	Back office	Open Payroll Detail, Reports preview, and Print / Save as PDF.
9	Future	Open Control Center and explain Supabase/Postgres multi-device synchronization.

Status rules that prevent confusion

- Unviewed is cleared by previewing an IR; unfinished is cleared only by finalizing.
- Acknowledged closes a supervisor request; it does not approve payroll.
- A DAR may be completed without mandatory supervisor review.
- Reset demo restores all starter reports, counters, queues, and payroll rows.

Close with this: The role and workflow model is already defined. The production step is replacing browser-only storage with authenticated, realtime database records so separate guard phones and admin computers stay synchronized.
